How it works

Designed to enhance fungicide application and efficacy in a range of crops.

Velocity improves disease control and yield response to fungicides. Spray drift is reduced, ensuring accurate spray deposition over the target surface.

Organosilicone surfactants ensure complete coverage, whilst humectants slow droplet drying. Fatty acid methyl esters improve penetration through outer wax layers.

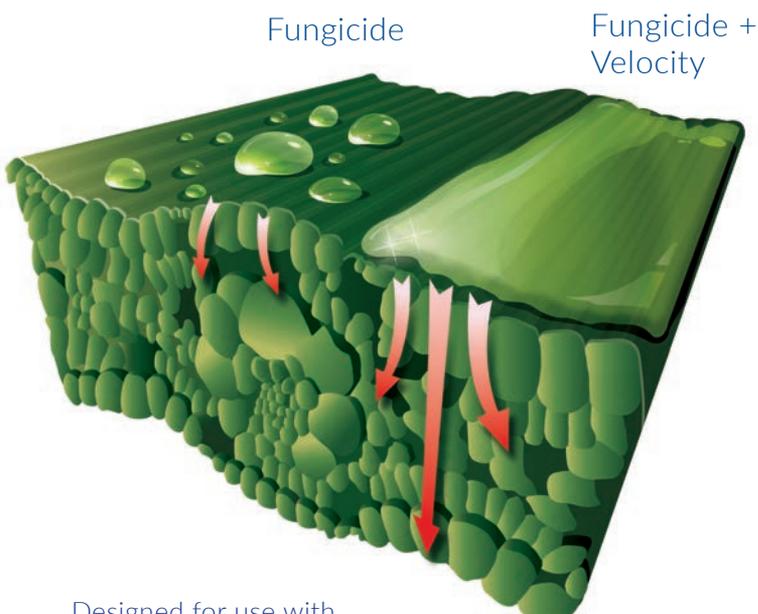

Suited for use in low spray volume treatments to improve the timeliness of application.

Velocity maximises the coverage achieved by low drift nozzles and reduces drift via standard or extended range flat fan nozzles.

Spray drift	Foliar			
Drift control	Wetting	Spreading	Penetration	Humectant

Velocity reduces spray drift and improves coverage and uptake of fungicides in a range of crops.

Pack Size	5 litre standard
Dose Rate	0.25-0.5l/ha
Examples of tank mix partners	<ul style="list-style-type: none"> • Excellent compatibility - can be used with a wide range of partners • Add to spray tank last

Designed for use with fungicides in a range of crops

- Enhanced coverage and uptake
- Better disease control & PGR effect
- Enable low volume application & improve spray efficiency (ha/hour)
- Higher yield
