Agrovista have market-leading deferred payment schemes for many of their oilseed rape varieties including a unique Clearfield Technology offer combining seed, companion plants and herbicide.

For details please call your local Agrovista agronomist. Alternatively contact us at: E: enquiries@agrovista.co.uk  T: 0115 939 0202
Regional suitability is indicated by E, W, N, symbols. These refer to Recommended List inclusion, Candidate List status or the fact that a variety has been commercially grown in that region by Agrovista and deemed to be suitable.

HYBRIDS

DK EXCEPTION
DK Exception offers an exceptional range of Dekalb benefits including a double phoma ‘9’ resistance figure for stem canker, together with pod shatter resistance. The ability to be sown from the earliest to very latest drilling position supported by good autumn vigour ensures consistency of performance across all conditions. DK Exception is used as the benchmark in Monsanto’s own European trials and is the most widely grown variety in Northern Europe.

WEMBLEY
Wembley has a gross output of 107% in the East and West recommended list and benefits from good lodging and light leaf spot scores. Consistent 3 year yield figures demonstrate the stability of Wembley over differing growing seasons. Wembley has all the characteristics to consistently produce high yields for growers.

INCENTIVE
Well established hybrid from the DSV breeding programme. Incentive is still a farmer favourite not least because of its sustained and aggressive growth over the first six to seven weeks after drilling which ensures rapid establishment enabling the crop to achieve its full potential.
ANNALISE
(TuYV Resistance)
Annalise is a candidate variety for the whole of the UK and has two class leading attributes. The first of these being Annalise is the highest yielding variety with resistance to TuYV. Secondly Annalise can claim the highest oil content of any variety in the AHDB Recommended and Candidate lists 2017/18. With gross output figures of 105% (E & W) and 106% (North) coupled with good disease scores, Annalise really does tick all the boxes for a modern day conventional oilseed rape variety.

DJANGO
Django is the very latest offering from the KWS Momont breeding programme and features the highest gross output on the 2017 UK candidate list. From the same breeder as Campus, Picto and Flamingo, Django offers the best compromise between yield, standing power and disease resistance.

BARBADOS
Fully recommended in the North with a 109% gross output figure but equally at home in the major oilseed rape growing regions in the East and West of England. Disease resistance is exceptional with a score of 7 for both light leaf spot and phoma stem canker. A real step forward combining high yield with class leading disease scores.
**CLUBROOT TOLERANT HYBRIDS**

**E W N**

**SY ALIBABA**

SY Alibaba from Syngenta is a new Clubroot tolerant variety that demonstrates best in class resistance to the common strains of Clubroot. Significantly better stem canker tolerance than Mentor and up to 0.4 tonne hectare increase in yield over that variety should mean that SY Alibaba becomes the industry standard for Clubroot tolerant varieties in 2017.

**E W N**

**MENTOR**

Fully recommended in both the North and East & West regions. Average yield but good standing power and oil content.

**CLEARFIELD HYBRIDS**

**E W N**

**DK IMPERIAL CL**

Now firmly established as the number one Clearfield hybrid in the UK. DK Imperial CL is a normal height hybrid retaining good disease scores typical of the DeKalb breeding programme. DK Imperial CL features pod shatter resistance which is technically important for a Clearfield variety as this minimises volunteers in the following crop.

**E W**

**VERITAS CL**

Clearfield variety from DSV featuring high oil content and gross output. Good standing power and excellent autumn vigour allied with strong light leaf spot and RLM7 Phoma resistance makes Veritas CL a premium Clearfield offering in 2017.

**E W**

**PHOENIX CL**

Phoenix CL is a new Clearfield variety from DSV featuring very high yield and many of the characteristics of the variety Incentive. For those looking for an alternative to the DeKalb Ogura type hybrids then Phoenix CL is the ideal choice.
CLEARFIELD®

OILSEED RAPE AND COMPANION PLANT TECHNOLOGY PACKAGE

Latest generation Clearfield seed combined with innovative herbicide technology and crop specific companion plants.

February payment available on Clearfield herbicides, Clearfield oilseed rape seed and companion plants when ordered together:

- CLEARFIELD SEED
- TABOR BERSEEM CLOVER
- CLERANDA/CLERAVO
- DASH

THE COMPLETE WEED CONTROL SYSTEM SPECIFICALLY DESIGNED FOR OSR
